(54) Title: FLAT PANEL DISPLAY DEVICE

(57) **Abstract:** A flat panel display device including a protecting sheet for protecting an upper surface is disclosed. The flat panel display device includes an image display part for displaying an image and a protecting part for protecting an outer surface thereof. The image display part displays the image by varying a voltage applied to electrodes oppositely formed on inner surfaces of a pair of transparent facing substrate respectively to thereby turn on or off each pixel. The protecting part is disposed on an outer surface of the substrate perceived by user's eye from an external shock or foreign matters. Accordingly, the flat panel display device strongly resist the external shock, and the foreign matters are easily remove from the flat panel display device. The anti-glare treatment is carried out on the protecting sheet to thereby prevent dazzling of users due to the reflection of the light.
